SUMMARY

Full Stack Engineer with 3 years of experience building and scaling web applications in startup environments. Expert in **React.js, TypeScript, Java, and Node.js** backend services, delivering end-to-end, production-ready solutions. Skilled at owning features across the full **SDLC**, collaborating with founders and designers, and improving system performance. Proven ability to deliver high-performance, responsive frontend solutions and scalable backend services aligned with **microservices and RESTful architectures**.

TECHNICAL SKILLS

- **Languages:** Java, TypeScript, JavaScript (ES6+), Python, C#, Shell Scripting
- **Frontend & UI:** React.js, Next.js (SSR/ISR), Redux Toolkit, HTML5, CSS3, Responsive Design, Accessibility (WCAG 2.2)
- **Architecture & Performance:** Redux Toolkit, Component Design Systems, UI Architecture, Web Performance Optimization
- **Backend & APIs:** Node.js, Express.js, REST & GraphQL APIs, Authentication (JWT), Caching
- **Databases:** MySQL, MongoDB (schema design, query optimization, performance tuning), NoSQL
- **Delivery & Reliability**: AWS (EC2, S3, Lambda), Azure, Docker, Kubernetes, GitLab CI/CD, Automated Testing (unit & integration)
- **Quality & Practices**: Postman, Selenium, Unit & Integration Testing, Secure Coding, Code Reviews, React Testing Library

WORK EXPERIENCE

Uday Ram Partners LLC. | Full-Stack Engineer **Aug 2025 – Present**

- Developed reusable **React components** using **Hooks** and **TypeScript**, delivering scalable UI features 25% faster via CI/CD automation.
- Boosted UI performance of internal application by 30% through optimized **React architecture, lazy loading, and code splitting**.
- Designed **scalable REST and GraphQL APIs**, elevating data reliability by 20% across microservices in production systems.
- Leveraged **Redux Toolkit** to streamline state management, cutting redundant API calls by 40% and boosting app responsiveness.
- Enhanced UI stability 25% by refining **DOM handling** and **optimizing browser** rendering for high-volume production applications.
- Applied **AI-assisted tools** (Copilot, Cursor) to speed up feature development, boosting developer efficiency and reducing rework
- Used GitLab and Git daily for **version control, reviews, and releases**, accelerating delivery pipelines and feature rollout by 30%.
- Built **reusable backend modules** and **API middleware** (auth, validation, logging) for secure, scalable production apps.
- Maintained detailed **code documentation** and **mentored peers**, improving team efficiency and deployment accuracy across releases.
- Led cross-functional **Agile/Scrum** teams across the full **SDLC**, partnering with client stakeholders and global delivery teams.

Jayam Solutions | Software Engineer **Oct 2024 – Apr 2025**

- Built **responsive React dashboards** with **API integration**, cutting data load latency 30% and enhancing UX engagement.
- Developed **MERN stack services** with Node.js/Express REST APIs, standardizing endpoints and improving service reliability by 20%.
- Engineered a scalable **single-page web application** with dynamic UI components, improving feature accessibility and efficiency.
- Implemented **React Testing Library,** increasing test coverage and preventing regressions in critical UI components.
- Strengthened accessibility compliance to **WCAG 2.2 AA**, reducing usability issues by 40% on core applications.
- Optimized **MongoDB** schemas and queries, improving backend response times by 20% across high-traffic application endpoints.
- **Troubleshot, debugged,** and **optimized** complex frontend/backend issues in production, improving reliability 25%.
- Leveraged **GitLab CI/CD workflows** for version control, merge requests, and peer reviews, improving deployment reliability.

Value Momentum | Software Engineer **June 2021 - June 2023**

- Owned frontend quality across multiple web applications, identifying UI/integration issues early, cutting production incidents 20%.
- Built **automated tests** to ensure application security, reliability, and accelerate regression cycles by 30% in production.
- Architected reusable automation frameworks with **Java (OOP principles)**, cutting test development time by 35%.
- **Troubleshot** production incidents in **Node.js** and web apps, cutting average resolution time and downtime by 25%.
- Worked on **enterprise package solutions**, customizing workflows and validating transaction and master data across insurance domains.
- Led **root cause analysis** and **defect triage** across Node.js apps, accelerating fix turnaround 22% and reducing post-release bugs by 10%.
- Diagnosed systemic faults using **logs and runtime behavior**, improving application reliability and performance by 20%.
- Tracked issues and technical debt using **JIRA**, improving backlog prioritization and release planning accuracy.
- Streamlined **Agile SDLC** workflows, achieving 95% requirement coverage aligned with evolving business objectives.

EDUCATION

Master of Science, Computer Science ***May 2025***

Illinois Institute of Technology, Chicago, USA

Bachelor of Technology, Electronics and Electrical Engineering ***June 2021***

GITAM University, Hyderabad, India
