SUMMARY

Staff-level Software Engineer with 4+ years of experience building and evolving web platforms, frameworks, and developer tooling using JavaScript(ES6+), React, and Node.js. Proven expertise in frontend architecture, scalable web systems, and improving developer experience (DX) through reusable abstractions, shared tooling, and standardized frameworks. Strong understanding of web performance optimization, browser APIs, and secure web development practices. Experienced in mentoring engineers, influencing technical direction, and supporting company-wide web ecosystems.

SKILLS

- **Frontend Frameworks:** React.js, React Native, Next.js, Redux, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap, Responsive Design
- **Backend & Full-Stack:** Node.js, Express.js, REST APIs, API Design, Middleware, Backend Systems Integration
- **Databases:** MySQL, MongoDB
- **Cloud & DevOps:** AWS (EC2, S3, Lambda), Azure, Docker, CI/CD Pipelines
- **AI & Automation:** GitHub Copilot, Cursor, AI-assisted code generation, test automation, AI-driven features
- **Quality & Practices:** Unit & Integration Testing, Postman, Selenium, Secure Coding, Performance Optimization
- **Build & Tools:** Git, GitLab, Agile/Scrum, Vite, NPM, Webpack, Redux Toolkit, GraphQL
- **Web Fundamentals**: Browser APIs, HTTP/2, Web Performance, Web Security

WORK EXPERIENCE

Uday Ram Partners LLC. | *Full-Stack Engineer* **Aug 2025 - present**

- **Led** development of **frontend architecture** patterns using **React and JavaScript,** improving scalability and reducing future rework by **30%.**
- Built reusable backend modules for authentication, validation, logging, and error handling, reducing duplication by **25%**.
- Improved UI consistency with **Tailwind** and **Bootstrap** layouts, streamlining styling tasks and reducing design correction time by nearly 30%.
- Collaborated with backend, cloud, product, and data teams, accelerating feature delivery timelines by **25%**.
- Optimized rendering, **Redux-based state management**, and API usage, improving application performance by **22%.**
- Championed **AI-assisted tools** (GitHub Copilot, Cursor) to accelerate delivery and reduce boilerplate.
- **Mentored** engineers through code reviews, increasing team throughput by **12%**.
- Led Agile sprint planning, technical design sessions, and retrospectives, driving technical strategy and increasing team throughput by **20%.**
- Leveraged **GitLab CI/CD workflows** for version control, merge requests, and peer reviews, improving deployment reliability.

Jayam Solution| *Software Engineering Intern* **Jan 2025 - April 2025**

- Built **modern frontend applications** using **React and JavaScript**, translating UI/UX designs into responsive, production-ready components.
- Built API-driven dashboards with React.js, enabling teams to consume services for real-time metrics, cutting reporting latency by **30%**.
- Developed **reusable backend utilities and middleware** following coding standards, reducing redundancies by **25%.**
- Improved page **load performance and runtime efficiency** through browser profiling, optimized rendering paths, HTTP request reduction, and secure web practices, including CORS and CSRF mitigation.
- Implemented **accessible web features** following WCAG 2.2 AA standards, and keyboard navigation best practices
- Optimized MongoDB schemas and query execution paths, reducing average query latency by **20%** and improving overall API response times.
- Collaborated with product, design, and QA teams to improve feature readiness and cross-team integration by **15%.**

Value Momentum| *Software Engineer* **June 2021 - June 2023**

- Built internal web frameworks and shared developer tooling to standardize application architecture and improve developer productivity by **35%.**
- Designed **reusable UI utilities and foundational libraries** adopted across multiple teams, reducing duplicated frontend logic.
- **Strengthened platform stability** by validating APIs and identifying integration defects **22% earlier**, improving release quality.
- Performed browser and Node.js debugging during production incidents, reducing mean time to resolution (MTTR) by **25%**.
- Provided technical leadership during **root cause analysis and defect triage**, accelerating fix turnaround and improving release quality.
- Influenced platform best practices by analyzing logs, runtime behavior, and system workflows across multiple applications.

EDUCATION

Illinois Institute of Technology, Illinois, USA. **May 2025**

Master of Science, Computer Science

GITAM University, Hyderabad, India. **Aug 2021**

Bachelor of Technology, Electronics and Electrical Engineering

PROJECTS

Mix & Match

- Designed and developed a **cross-platform mobile application** to recommend color combinations using **React Native and TypeScript.**
- Implemented a **dynamic color picker UI** with responsive layouts, ensuring a consistent experience across **iOS and Android**.
- Integrated **NoSQL data storage** to efficiently manage large color datasets and user preferences.
- Utilized **Expo** to streamline builds, reduce deployment friction, and accelerate development cycles.
- Applied **performance optimization techniques** to ensure smooth animations and fast UI interactions.
